

Netrunner

i am absolutely, positively outraged at the decision by nsg to kill off the beloved, complex, integral character sundog

- [Standard Metagame 2024-05-12](#)
- [VP Meta Clustering](#)

Standard Metagame 2024-05-12

About the process

- Take the top 30% of decklists of all standard tournaments from the release of RWR (2024-03-18) to today.
- Use a big clustering algorithm to group them all together.
- This time I'm using [DBSCAN](#). This has a few advantages:
 - Determines its own number of clusters
 - Excludes noise, which takes out anomalies like Ampere decks and off-meta combos
 - Decently configurable
 - Deterministic output
- As a result, some decklists are lost to the noise factor. I think this is probably correct if we want just the meta you'd expect to win a given big tournament, but some examples of things that are lost are:
 - Prison MirrorMorph
 - Nuvem
 - PE lists
 - Kill Outfit
 - Stab Criminals
 - Mercury
 - Seb
 - Aesops Shapers
- I think most of these exclusions are fine except maybe the PE and Outfit? Will continue tweaking.
- The labels are manually added after
- Code is available [here](#).
